Small and Medium size Enterprises (SMEs) are an important driver for innovation and growth in the EU. At the same time, SMEs face increasing challenges in protecting their information security and privacy. The EU SME SECURE project aims to address these challenges by developing a cost-effective suite of cyber-security tools for SMEs.

Context:

Despite rising concerns about information security risks, the adoption of information security and privacy standards by SMEs is relatively small. The SMESEC project is addressing this issue by proposing a suite of cyber-security tools that support SMEs in protecting their information assets.

Approach:

The SMESEC consortium is proposing to develop a cost-effective suite of cyber-security tools. The suite supports SMEs in understanding and implementing information security standards. The framework developed under the project shall enable SMEs not only to look at cyber-security as an obstacle but also as an opportunity for business.
