Context:
Small and Medium size Enterprises (SMEs) are an important driver for innovation and growth in the EU. At the same time, despite rising concerns about information security risks, the level of SMEs information security and privacy standards adoption is relatively small.

Approach:
The SMESEC consortium is proposing to develop a cost-effective suite of cyber-security tools. The suite supports SMEs in understanding and adopting cyber-security standards. The framework for SMEs shall allow SMEs to not only look at cyber-security as an obstacle but also as an opportunity for business.
