SMESEC project

Context:
Small and Medium size Enterprises (SMEs) are an important driver for innovation and growth in the EU. At the same time, they do not yet fully benefit from the current information security and Privacy Standards for SMEs. The “SMEs and Information Security and Privacy Standards” study of 2016 that, despite rising concerns about information security risks, the level of SMEs information security and privacy standards adoption is relatively small.

Approach:
The SMESEC consortium is proposing to develop a cost-effective suite of cyber-security tools. The suite supports SMEs in understanding their needs, helps them to define their strategy, and provides them with the necessary tools to implement the solution. The framework shall allow SMEs not only look at cyber-security as an obstacle but also as an opportunity for business.
