Small and Medium size Enterprises (SMEs) are an important driver for innovation and growth in the EU. At the same time, many SMEs consider information security risks to be a major barrier to achieving business growth and success. This is supported by the European Commission's "Information Security and Privacy Standards for SMEs" study of 2016 that, despite rising concerns about information security risks, the level of SMEs' information security and privacy standards adoption is relatively small.

The SMESEC consortium is proposing to develop a cost-effective suite of cyber-security tools. The suite supports SMEs in looking at cyber-security as both an obstacle and an opportunity for business. The framework shall allow SMEs not only to look at cyber-security as an obstacle, but also as an opportunity for business.
