Context:
Small and Medium size Enterprises (SMEs) are an important driver for innovation and growth in the EU. At the same time, businesses need to focus on the protection of data and information. A survey of the European Commission’s 2016 study of information security and privacy standards adoption shows that despite rising concerns about information security risks, the level of SMEs' information security and privacy standards adoption is relatively small.

Approach:
The SMESEC consortium is proposing to develop a cost-effective suite of cyber-security tools. The suite supports SMEs in understanding cyber security risks and in creating a culture of cyber-security awareness and management. The framework shall allow SMEs not only look at cyber-security as an obstacle but also as an opportunity for business.
